

NEWS IN BRIEF

Satellites
'threat to staff'

A THREAT to administrative staff is posed by the use of communications satellites where they enable companies to set up one administration centre to handle worldwide information processing, according to Barrie Sherman, director of research at ASTMS.

Giving an example, Sherman says that a consortium of UK insurance companies has already carried out a feasibility study into this method, and may use it to handle work generated by their Australian offices.

More competition

YET another US company, Citel Corp, of Northbridge, California, has entered the market for plug-compatible mid-range IBM 370 CPUs. The first two offerings are called the 30XX, Model 3, matching the 370/138, and the Model 4, matching the 148.

Cray in UK

TO support installations in the UK, Cray Research has set up a British subsidiary with Peter Appleton Jones as managing director. Cray systems as far as announced in the UK include the 1 Megaword machine at the ECWF weather centre at Shinfield Park, Reading, and an interim half Mword system at the Atomic Weapons Research Establishment at Aldermaston, Berks (CW, April 20).

Ariel boss resigns

MANAGING director and one of the creators of the Digital Equipment PDP-11-based Ariel share-dealing system for financial institutions, Calin Leach, is resigning to become an executive director of Fidelity Management & Research (UK).

Latest: New ICL
General Ledger Package
now available

Already over three hundred organisations worldwide are enjoying tremendous benefit from the General Ledger Package supplied by Metra Lowndes-Ajax. In the United Kingdom alone some forty companies profit from its use. They come from fields as diverse as manufacturing, banking and finance, retailing and a host of others. Find out more by clipping the coupon below or phoning Waller on 01-890 2400 now.

Now available in its latest form for ICL 1900 installations from Metra Lowndes-Ajax.

Metra Lowndes-Ajax, 17 Lansdowne Rd, Croydon CR0 2BX. Tel: 01-660 2400

Store group £2m order for ICL 9500 terminals

ONE of the first customers for ICL's new 9500 series of point-of-sale terminals is the Alders department store group which has placed a £2 million order for over 500 of the 9540 terminals and an ICL processor, as part of a POS network which will be based on 18 Gamma Olympic processors and a digital equipment PDP-11/70.

£360,000 of the order is made up by the Gamma Olympic hardware, which is based on the Oxford Robotics 16-bit processor, a DEC LSI-11, and software prepared by Gamma Telecommunications Systems of Wokingham.

Alders will use the POS network to handle all its in-store merchandising control and this includes such applications as in-store sales accounting, and unit stock control, while further developments planned are point-of-

DESIGNED for use in busy retail environments, the ICL 9500 terminal in the picture is being used in a hardware store.

receipt and customer credit control.

Equipment will be installed at most Alders branches, including

Arding and Hobbs of Cleethorpes Junction, and Whiteleys of Boyswater. There are two terminals in the UK at Kildgrave and Latchworth.

new 9500 range, which was officially announced this week. They are based on the Intel 8080 microprocessor.

The ICL 9510 is interactive, and designed for online use with a system controller, either in-store or via Post Office lines. It can also be used as a stand-alone device which uses a cartridge recorder for data storage.

The other terminal, the ICL 9512, has been designed primarily for cash collection, cash recapping, and data capture in stand-alone situations. It has all the facilities of the ICL 9510 but also incorporates 32 programmable accumulators for easy audit control, flash totals and sales analysis.

Volume production will take place at ICL's Utica, US, factory, although the 9550 controller range will be manufactured in the UK at Kildgrave and Latchworth.

Equipment will be installed at most Alders branches, including

Inmos goes for multi-site,
multi-product plans

By MARTIN BANKS

PRODUCTION plants and research centres in more than one location in the UK and the Far East are being considered by Inmos as part of its future plans in which a single chip micro and range of other products are likely to be more important than its much publicised interest in a 64K random access memory.

It is even possible that the National Enterprise Board microelectronics venture will buy the 64K RAM from another manufacturer.

Among the areas being considered are Warrington New Town Science Park, Tynehead and the Scottish Lowlands where there are already strong enclaves of semiconductor and electronics manufacturers.

Site selection has not yet officially started, but is expected to begin soon.

These facilities, part of the company's five-year plan will all be concerned with wafer fabrication. The assembly of the

single-chips with plenty of ROM, RAM and I/O interfacing will board.

The emphasis has as far been on the 64K RAM that Inmos is scheduled to produce, but of far more long term importance is the company's plans in other areas. A whole product range is being developed, key element of which will be a single chip microcomputer.

By committing itself to the NMOS process technology, Inmos has a large potential product range to choose from, extending from ROMs, RAMs and PROMs, through peripheral and control devices, to both large number crunching micros and

microcomputers.

The key question in this is

how fast the production lines

can be established. Although a team of process people is being assembled by Inmos, it has not yet placed any orders for production equipment, even though its own estimates suggest that its first products will be available within two years.

Inmos' solution for the 64K RAM is shorter than for a micro for such a small company — only 10 people at present — to do both at once seems a tall order.

It is therefore possible that one product, probably the 64K RAM, will be bought in from an existing manufacturer.

This route may also be followed as a means of "tuning" the production plant, when it is established. This would mean taking a second source licence on an existing product, say a 10K RAM, and running it through the new plant.

Divis on stream
A FIRST dividend of five pence share is to be paid by DataStream, the computerised financial information service.

HYTERM
DATA TERMINAL

- 96 Character/daisy wheel printing
- Multiple type fonts
- Variable character spacing to 1/10
- Programmed bidirectional printing
- ASCII and IBM 2741 compatibility
- Two colour cartridge ribbon
- Extensive forms control
- HYPLOT advanced graphics
- 1200 baud buffered operation
- APL capability

Sicob 'snowstorm' over
Burroughs' plant closure

A MINOR sensation brought business to a halt at the Sicob computer and office equipment exhibition in Paris last week, when a group of demonstrators staged a "manifestation" from the gallery overlooking the IBM stand.

Their wrath, which took the form of a snowstorm of leaflets, fell rather unfairly upon IBM, since the cause of their discontent was Burroughs' decision to close its Paris research centre.

The leaflet was an open letter to M. Simon Nora, co-author of a major report called The Informationisation of Society, and suggested that moves like the closure of the Burroughs centre by multinational computer companies threatened France's ability to survive as a major computer power.

The CGT, French Trades Union federation, has also complained about computer companies reducing their R&D effort in France.

It accused Burroughs of closing the centre without

reference to the French government, and suggested that the real reason was not that it was uneconomic for the company to operate similar centres in the US and France, but that as the growth in its R&D expenditures was exceeding growth in turnover worldwide, the company wanted to move all its R&D back to the US.

A Burroughs spokesman in Paris told Computer Weekly that 70 people were affected by the closure of the R&D centre and that all would be offered other jobs within the company.

"We have not replied to the letter because we believe the points it makes are nonsense," he added.

The CGT, French Trades Union federation, has also complained about computer companies reducing their R&D effort in France.

Good Lord...

EVERYBODY, but everybody, as I have said before, is getting into the act of pronouncing on the Social Impact of Computers. Even walking in Leicester Square, when you get a religious tract pressed into your hand, you will probably find that it explains all about computers to you.

A recent issue of *Awake!* published by the Watchtower Society has a lead story entitled "Computer — Tool or Tyrant?" which sets out to reassure us that computers "remain an extension of God's handiwork, not an improvement to it."

It continues, "The computer is a machine, not to be feared or revered by man, but to be used to relieve certain burdens and provide him the freedom to...

No answer to that

WE all have experience of shop assistants who know nothing about their wares, but in the computer business we usually expect salespeople to have a clue or two. However, with the mushrooming of hobby shops in the States, it is only to be expected that there should be problems with staff...

An Englishman of my acquaintance, doing his bit for the old country at Wescon in Los Angeles, went into a computer shop where a personable young lady gave him the usual slick sales pitch along the lines of "Here is our latest personal computer that will do your income tax, the washing up, your child's homework, and hum the Star-Spangled Banner, all for only two dollars fifty..."

A sick system?

THERE have been plenty of reports of computerised medical diagnostic systems, and I expect we are all steeling ourselves for the inevitable day when we have to get our sick notes from a mechanical doctor. But a mechanical patient is a new one on me.

At Southern General Hospital, Glasgow, they have a computerised patient for the medical students to practise on.

I expect it works like an Apollo Moon Landing game: Too many drugs prescribed and you get a message, "Sorry, your patient has just hit the surface of the Moon at 20,000 mph."

What would be really interesting is if the computer

in the fast-changing world of technology avarynon needs something to hold on to; some symbol of continuity. Lawyers have Latin, doctors have receptionists, vicars

have cassocks and DP people have clichés. So argues ANGUS McQUIBBLE, a leading expert in end user interface situations with price/performance throughput con-

siderations.

Or, as we say in the mid-cliché consultant. In this discourses upon his hobby...

Some hints on collecting DP clichés

experience more fully the joy of living."

Does your computer help you experience more fully the joy of living? I certainly hope so.

Another passage says, "To some, the computer is the mechanical genius that can instantly notify a person that reservations are confirmed for a 10,000 mile (16,000 kilometre) trip."

A reader's reaction to this was, "To some, a human being is an organism that can go through an article, mechanically converting reference to miles into its exact equivalent in kilometres."

Still, remember: except the Lord build the computer system, they that build it labour in vain.

"Fine," said he, "What languages does it have?"

"Sorry," was the reply, "we're fresh out of language." After some bewilderment, my friend established that in fact the shop had sold out of cassettes.

I'm sure that normally the shop is a veritable Tower of Babel.

What do you suppose the Bluebell Times readers in Gedling and Chelmsford St Giles made of this advertisement in their paper's Personal column the other day? "Pet computer for sale."

Well, people keep pet Borzoi and pet cockroaches, why shouldn't they have pet computers?

I branched into my own speciality accidentally, on the day when I entered the executive washroom off the main foyer and surprised a smart young stranger talking with keco sincerity into the mirror above the washbasin. It was then that I discovered the DP selling cliché. Other members of the Cliché Collectors' Club urged me to move into the High Technical cliché such as "DL/I is the natural successor to DB01" or into the Simplefolk Cliché, such as "I really know nothing about computers, but I'm not there the selling garbage-in-garbage-out" or "Forgive my ignorance, but isn't the computer just a great big, sophisticated adding machine?" My friends assure me that there are interesting variations to be found in both the variety lay-folk reach for their revolvers when they hear the word "database." Experienced salesmen know that they are expected to stand by database as a concept but to deny that they would ever dream of letting the lay-folk into its full application. Thus, they would use the phrase "partial database" even though their proposal links the daily postage stamp denomination analysis to the 1980 strategic plan.

Maintenance produces, "Not a problem, in fact a strength/Highly trained staff/Advanced diagnostic skills/World-wide coverage/in a matter of hours—though maybe not on Christmas Day, ho ho ho." Conversion has "A dawdle/so easy you won't notice it/transparent" to the user/a piece of cake". This is sometimes accompanied by a sideways flicking of the hand, which symbolises brushing away an inconsequential piece of cake with the help of powerful new conversion aids.

Manufacturing systems software is always "Comprehensive/Designed to fit user requirements/needs a minimum of adaptation/proven in use." (I have never found any need to test the truth of clichés no more than would a stamp collector test the need to...

There's hope for us all: Professor Paul Samet, Director of University College London Computer Centre and President of the BCS, when he was at school applied for admission to UC as an undergraduate and was turned down.

Beginners who are starting a Selling Cliché collection ought

are not here to sell you a computer," and then follows a wry smile, "but we'll be disappointed if it doesn't." This is then linked to "The reason why we are here is to help you take the challenge of change to cope with the ever increasing complexity of modern business—to support your plans for future growth/to help hard pressed management." An optional cliché at the end of this chain, but only attempted by those who can say it with a straight face and without giggling is, "You believe they will. In a fast changing world, everyone needs something to hold on to. See symbol of continuity. Lawyers have Latin, doctors have receptionists, vicars have cassocks and DP people have clichés."

I hope I have managed to convey the fun of recording a cliché for the first time and the excitement of hearing it again, and

Labour split on Freedom of Information Act

THERE is now a clear split between the Labour Party and the government on a Freedom of Information Act.

At last week's Labour Party conference in Blackpool, a proposal was passed calling on the government to introduce legislation in the next Parliament, and a draft Information Bill was agreed.

In a White Paper on the Official Secrets Act, however, the government made it clear that it would not introduce a Bill at this

stage as it believed further study was needed and it feared the costs of implementation might be too great.

The Labour Party's draft Bill fails to provide in-depth guidelines on the question of the access to personnel files, although it has a whole section aimed at preventing the release of personnel files.

It recommends that a national register be compiled so that citizens know where to go to find information.

The IBM 8100 Information System.

COMPUTER WEEKLY ANALYSES THE LATEST ANNOUNCEMENTS FROM IBM

Racial datacoms group acquires another firm

THE last-growing new Racial Data Communications Group, which takes in Racial-Milgo and other companies in the data field, has acquired a new member, Enquiry Systems Ltd. Racial already had 20% of the company and is paying £378,000 for the other 80%.

The company will be renamed Racial-ESL Ltd.

The most significant product offered by Racial-ESL is a new small, low-cost store and forward message switching system controlled by a specially developed processor with a

communications-oriented instruction set built around two four-bit AMD 2901 bit-slice micros.

The systems, which can be used as stand-alone message switching systems or as satellites to a larger switch such as the Case MSX or ITT 8400ADX, is in £5,000 to £10,000 price range. Both Telex and Asci coded messages are supported.

EST had a turnover of £600,000 in the year to July 1978,

and plans to double this within two years.

IF, as IBM said at the time, Systems Network Architecture was the most significant announcement since System 360, the 8100 Information System is the most significant announcement yet made within SNA.

Physically, the two 8100 processors, the 8130 and 8140, are 16-bit minicomputers with the ability to address 32-bit words, a feature increasingly being introduced in new minis, exemplified by the Midcomp Classic and the CTL 9500.

Orders for ICL 9500 equipment are already put at over £1 million by the company

cessors, are contained within the operating system, which means that an SNA network of 8100s can be established with no 370 or 3030 series host.

The Cobol compiler is a new one and some translation will be necessary to transfer programs from other IBM machines to the 8100.

The DPPX operating system is the system for the future, and the base system includes a full screen Source Program Editor and a test-debug program for interactive program development. For an additional fee, users can also rent Distributed Processing Services, full screen layout definition, and Development Management System, for definition of application logic, both of which generate Cobol source code, but offer the user a non-English interface. This was one of the major aims of the System Q operating system which was scrapped with the IBM FS project to replace System 360 with a completely new line of minicomputers.

The two most obvious drawbacks from the user's point of view, neither of which is likely to prove decisive, are that a processor change is necessary to upgrade from the 8130 to the 8140, and that he has to offload the DPPX operating system and load DPCX if he wants to

The two most obvious drawbacks from the user's point of view, neither of which is likely to prove decisive, are that a processor change is necessary to upgrade from the 8130 to the 8140, and that he has to offload the DPPX operating system and load DPCX if he wants to

The DPPX operating system is the system for the future, and the base system includes a full screen Source Program Editor and a test-debug program for interactive program development. For an additional fee, users can also rent Distributed Processing Services, full screen layout definition, and Development Management System, for definition of application logic, both of which generate Cobol source code, but offer the user a non-English interface. This was one of the major aims of the System Q operating system which was scrapped with the IBM FS project to replace System 360 with a completely new line of minicomputers.

Competing with costs of human skills

IT has been in trade cliché of Artificial Intelligence for as long as I can remember that "our time will come". The world will surely need smart robots and machine translation and intelligent databases and the rest. It is characteristic, however, of even the truest prophecy that its fulfilment can take a turn subtly different from that envisaged by the prophets.

Of course the world will need those things, and needs them now. But for the market-place to exert a significant tug one of two things must happen: either (1) it must be possible to make the product for a good deal less than the going cost of human performance of the same function; or (2) abnormal circumstances must arise which push the going cost of conventional solutions through the roof.

The second eventuality is with us in one or two very special cases. The cost of underwater inspection, cleaning, and repair of North Sea oil rigs by human divers is so great that the prospects of meeting by these means alone the standards demanded by legislation are nil. It is not surprising, therefore, that commercial concerns of high technological competence are developing unmanned submersibles with powered manipulators and TV "eyes". Sophisticated computer control systems mediate between the sensori-motor devices of these vehicles and the remote commands of human operators in surface vessels. There is no absolute need to incorporate AI, but consider the inevitable next stage.

Once special need has forced the use of such costly systems, the economic promise of depending with the umbilical cable will act as a continual lure. The cable transmits power in one direction and signals in two. Without it, a free-swimming submersible must carry its own power-pack.

What about the signals? The situation is strictly analogous to that of NASA's Mars Rover vehicle for the 1980s. Cut off from human data interpretation and decision-taking, the vehicle must have artificial intelligence or be lost. This emergency is the pr-

DATA PROCESSING INDUSTRY TRENDS

Abnormal costs of human skills are now arising in the Arab world. Strenuous attempts to develop modern health services are hampered by severe lack of trained medical personnel. Cash is not the problem. Indeed British medical visitors to Saudi Arabia and neighbouring territories report widespread purchase of the latest and shiniest American equipment, which the local level of medical and technical education is not adequate to put to use. Openings exist here for easy-to-use "expert systems" of the kind originated in the UK by Dr Dombal for the diagnosis of acute abdominal pain. In two years' experience of such a system at Bangour Hospital, near Edinburgh, a substantial rise has been reported not only in the frequency of correct diagnosis (the machine system level) in this regard with a good consultant) but also in the diagnostic capacity of the house surgeons whose skill it challenges. So there is a two-fold benefit, of which the machine-aided training aspect is probably of even greater third world relevance than the device's primary function.

Cases like this are no more than local stirrings of a fresh breeze here and there. Gusts in a different area however are perceptible which could conceivably become a mighty wind. I am thinking of the trend towards automating the craft of programming. In a sense this has been going on since Brook's Code and the compiler of the 1950s. But a qualitatively new fact of economics is raising its head which lifts program automation from the category of "very valuable to have" while it shares with smart submergers and intelligent diagnostics, into the realm of a generalised emergency, liable to spread across the whole computer industry in the 1980s.

The sgo-motivators are achievement, recognition, ad-

ditions schools and branches of computer science claim special relevance to this problem. Conspicuous among them is Artificial Intelligence.

There is a phrase about

separating the men from the boys. The intensified need for program automation will, as

such, do this.

LETTER TO MICHIE'S PRIVATEVIEW

Epistemic illusions

In other words, there can be no sense data input to the central processor, nor any evaluation, immediate or high-level, except by a constant process of comparison with a hypothesis or preconception. The hypothesis is reinforced by apparent conformity with the processed input, but the processed input is itself partly prejudiced by the hypothesis, so that "apparent conformity" is not an unbiased standard of comparison.

Any gross difference is recognised — "the hypothesis is a lie" — but this only conceals the fact that, in the end, all hypotheses are different from the reality they attempt to match. All therefore are lies. We have only a choice between lies.

Now a computer can in some contexts measure "sufficiency" — I would accept your judgment as a specialist that the structures governing the comparison and the sufficiency could be, in time, made flexible enough and subtle enough to measure similarity of conceptual structure at several levels of abstraction.

Developments in fuzzy logic may become relevant here, though the matter is subtle; or fuzzy the process might become, the explicit or implicit assumptions of the programmers must affect the inputs and outputs. The subtler the more difficult to trace such assumptions.

However, I've seen two main problems arising from this. One is the communality of the programme's insights. Between two syllogisms meaning is always conveyed by sufficiently similar sit-

PROGRAMMER NOTES

Are programmers a selfish breed?

PROGRAMMERS and analysts (in the US at least) don't give a damn for assuming responsibility for their work or for the organisation that employs them.

But what does motivate them is the work itself, technical achievement, feedback from technical supervisors — and their own personal interests.

These are the startling conclusions of a survey of the motivation of DP personnel conducted by Dr Luc Fitz-enz, director of industrial relations for Four Phase Systems. The survey results are published in the September issue of the US monthly Datamation.

Programmers and analysts made "personal life" one of their top five motivators, while managers and project leaders placed this aspect low down on their list, as do most people in other similar surveys (see figure 1).

The survey, which was based on interviews with about 1,000 staff in the US, showed that men from the total survey placed work itself as the highest

priority and responsibility seventh place, whereas women placed responsibility much higher, as their third priority, work in fifth place.

In trying to draw conclusions based on the results, Dr Fitz-enz admits that, despite following interviews with some programmers, the reason for the rating for responsibility left him perplexed and he carries further studies.

Motivation factor	Priority rating	General	DP
Achievement	1	1	1
Recognition	2	4	2
Work itself	3	3	1
Responsibility	4	7	4
Advancement	5	5	2
Salary	6	10	6
Growth potential	7	2	1
Relations with subordinates	8	3	1
Status	9	14	9
Relations with superiors	10	12	11
Relations with peers	11	8	10
Technician supervision	12	5	12
Co. policy and admin.	13	15	13
Working conditions	14	15	14
Personal life	15	11	15
Job security	16	13	16

Figure 1. Comparison of priority of motivational studies; the general priorities come from a study of all occupations in 1980 and the DP results from the Dr Fitz-enz study.

STEWART Metchett, a US mathematician, has worked out a possible form of the Digital Fraction $\frac{1}{n} = \frac{ABCDE}{FGHI}$. The figure 94 solutions, ranging from 1 to 13,534 (n=9) to 13,452,697 (n=2).

There is no solution for $n=6$, $\text{const}\{n\neq m\}=7$. Can you find before turning to page 6?

VARIAN PRINTER/PLOTTERS

Variants the widest for money printer/plotter that is suitable for all popular paper widths — with a wide field of application from computer listing, through C.A.D. to structural design.

Hardware and software costs are lower than most others on the market.

And with Varians high reliability, servicing is minimal. At Euro we have many years in-depth printer/plotter experience. Take our advice — for economy you can trust, choose Varien.

ASK ABOUT THE NEW 8000 SERIES

Thanks to proven reliability and advanced electrostatic design, the Varien 8000 Series delivers colour and super graphics with minimum computer interaction.

Cobol is the broad and bitter of the data processing world. It is despised by many academics and purists but can be ignored by nobody.

Being such an intrinsic part of day-to-day DP life, Cobol is often taken for granted as an unchanging part of pr-

ogramming work. But major changes are planned for Cobol in the 1980s, much of it signalled by the Cobol 80 Journal of Development which was published last month.

As chairman of the BCS Cobol specialist group and a member of the

British Standards Institute Cobol working party, John Triance has played an important role in the British contribution to the shaping of Cobol in the future. In this article he summarises major Cobol developments likely to take place in the next decade.

EDITED BY PETER HEWITT

UK playing major role in development of standards

by Cobasyl, would overcome the many years of delay between the acceptance of enhancements by Cobasyl and their becoming available to the user. It would also overcome most Cobol portability problems.

The UK's contribution to all this work should not be overlooked. Three organisations, namely The British Standards Institute (BSI), the BCS and ICL play a significant role in the development of Cobol.

ICL is a member of the Cobol working group which meets about six times a year to monitor the progress of Cobol and give its views to the appropriate bodies. It has recently finalised its view on the form the next standard should take.

The BCS through its Cobol Specialist Group is responsible for the proposal which made FILLER optional and continues to liaise with Cobasyl. But its major contribution this year has been to keep Cobol users in the UK abreast of developments in the language, some of the more important variations from the US addressing its meetings.

Grace Hopper, who played such a vital role in the creation of Cobol, reported on what was happening and is likely to happen in Cobol and related topics. Don Nelson, the chairman of the Cobasyl Cobol Committee, gave an interesting insight into the workings of his committee and indicated the items which are currently at the top of its agenda. He also gave his comments on a number of British suggestions for the improvement of Cobol. Finally Gerry Weinberg described how Cobol could be developed independently of Cobasyl and ANSI by means of a macro processor such as MetaCobol.

These Cobol users who do not wish actually to influence the direction of the language are still well advised to follow its progress. The changes being planned now will offer new opportunities for programmers in the next decade. They also pose a distinct threat to the future portability of the programs currently being written.

John Triance g.9.78

Cobol is due for major changes in the next decade

TO many users Cobol must appear as one of the few static features in the fast changing world of computing. Cobol remains basically the same regardless of the programming techniques, operating systems and hardware used. Even the micros present only a minor hurdle to the stability of the language as standard Cobol compilers are already becoming available on them.

In addition to these major enhancements there are more than 50 significant differences between Cobasyl Cobol and the current standard. Most of these differences are additions to the language, some of the more interesting of which are:

language have made the facility rather cumbersome in places but will undoubtedly allow structured programs to be coded in a more readable way.

OP SPOT

HINT OF THE WEEK

Controlling small library of tapes

THE size of an installation has a considerable influence on the role played by its operations staff; for instance, at the larger installations librarians are often employed to control the movement and usage of magnetic tapes, whereas at smaller sites the operators are sometimes expected to perform this function.

On the subject of the letter, Deborah Palmer, an operator at the Worthing installation of the Gateway Building Society, sends the following hint to Op Spot:

"For sites which only have a hundred tapes or so," she says, "how is it a simple of a tape library which can be wound up easily and quickly. It will add to the security of the installation and reduce the number of tapes which are lost or mislaid."

Deborah suggests that each tape should have two identifiers, one for its storage and another which identifies the file on it, this is not the case.

states how often it is used, etc. The letter might have the format ABCD0, "where A indicates when the file is used (daily, weekly, monthly, etc), B is a number given to the file, C is its cycle number and D indicates the order in which it is used with the job."

The library should be supplemented by a pool of numbered and unnumbered scratch tapes, says Deborah. She goes on:

"The records could be kept up to date by writing any permanent or temporary changes in a book and using this for any future reference." She adds, "We use a similar method to that I have described."

Stevens' hint comprised two parts:

Firstly, he suggested the use of a macro in order to save the operator having to type a long message each time a printer cannot be engaged or allocated under George 3.

Secondly, he said that a macro

called "PAY" might be put to good use in relation to the alignment of payslips.

Replies Cosway, "Some sites may not take too kindly to Terry Stevens' suggestions that operators create their own macros. We, for example, already have a macro called 'PAY' and so his second tip would cause that one to be overwritten."

But he praises Stevens' first tip.

"However, his first point is a good one and we have found that the operators at our site do similar things in order to save time."

The trouble is that George 3 has so many combinations of messages. For example, if two printers are available when it is time to print the payroll, the system will request that payslips are placed on both of the units. In that event George 3 issues the

following messages:

1) PLEASE ATTRIBUTE PAYSLIPS ON UNIT 014

2) PLEASE ATTRIBUTE PAYSLIPS ON UNIT 015

For practical reasons the operator will probably want to dedicate just one of the devices to the job. He continues:

"Frequently, it is necessary to restrict the output of payslips to just one printer and the operator must type in a long message to indicate which of them is not to be used." That message is:

CD ATTRIBUTABLE PAYSLIPS TO UNIT U14

Now, the programmers were not aware of this until the operators brought it to their attention. Then the situation was easily rectified.

Says Cosway, "Alerted to the problem by our operators we made simple modifications to the operating system; we

changed the format of the printer requests so that the unit number comes first." Thus the above message is replaced by that which follows:

PLEASE U14 ATTRIBUTE PAYSLIPS

He continues: "Now the operator needs only to enter 'U14' in order to turn down the printer."

Cosway concludes by stating the benefits to be gained from communication and co-operation between operation and programming.

"Firstly, the operators are encouraged to make observations about the way in which they are run.

"Secondly, by acting upon their observations the site becomes much more efficient.

"I am surprised more sites don't listen to their operators. After all, they are the only people who actually see job running on the machine nowadays."

COMPUTERISED jogging was the order of the day in Hyde Park, London, when 11,000 people of all ages took part in the Sun Times National Fun Run. ICL

provided six 1801 minis to keep track of the competitors in the 17 events and analyse the results by team placing.

Even the setting of competitors' numbers was

automated — read by OCR wands. Gold, silver or bronze certificates were produced on line printers for every competitor.

ICL also provided 200 of the runners, and the starter of the first race was managing director, Dr Chris Wilson. The Fun Run was in aid of the British Heart Foundation.

By Bernard Allen

Listen to ops' advice to achieve the best results

THE skill and experience of operations staff should be coupled with the expertise of systems programmers to ensure that the operating system is used to best effect and the throughput increased.

This message is emphasised in a letter from Roy Cosway, who is a senior systems programmer at Cornwall County Council's Truro installation. He writes to Op Spot in response to a hint from Terry Stevens of the University of Sussex regarding the use of macros in the George 3 environment (CW, September 21).

Stevens' hint comprised two parts:

The records could be kept up to date by writing any permanent or temporary changes in a book and using this for any future reference. She adds, "We use a similar method to that I have described."

Deborah suggests that each tape should have two identifiers, one for its storage and another which identifies the file on it, this is not the case.

Services industry has openings for 2,800 graduates in coming year

OPPORTUNITIES for graduates in the computing services industry are looking better, careers advisers from 47 universities, polytechnics and colleges were told last week. According to the CSA, bureaux and software houses will be looking for 2,800 graduates over the coming year, having hired 1,800 in the last

12 months.

The careers advisers were at a meeting organised by the CSA to bring to their attention the scope of opportunities in services companies, pointing up the fact that the computer industry is not only composed of manufacturers.

John Ockenden, CSA president, described the services business, and Colin Rowland from Logica and Olga Charlton from Scicon gave descriptions of their careers so far, from senior and junior viewpoints respectively.

The reaction of the advisers present was enthusiastic. One, from King's College, London, said that he had not appreciated how big the field was, and that he intended to bring it to the attention of his students.

Ockenden pointed out that it was not only computer science graduates that firms hired. This could be seen from the fact that only 1,500 students graduated in computer science each year, compared to the 1,800 that CSA members currently hire.

N. Bonnitt, from the Technical Education Council, suggested that the CSA could help considerably in the design of the computer science courses for the new TEC qualifications that are replacing HND and OND. The Council needs more advice from firms about exactly what training people need.

CSA director-general Alan Benjamin agreed that this co-operation would be welcome.

Forces' version

A FULLY militarised version of the Miproc 16 high speed micro-computer has been introduced by Plussey Microsystems.

Known as the Miproc 16M, it has a processing speed of 3.6 million instructions per second.

Summing up the 8100 as a very effective entry into true distributed processing, Orlensky also thought that it would make him much tougher for minimakers like Data General with the Eclipse M800: "Because the 8100 allows users to avoid bad connections altogether, it will also make migration to Systems Network Architecture take place that much faster."

Orlensky considered that its 16x RAM in 8100 could be an easy trend at IBM, which has always tended to rely largely on well-established, rather than leading edge technology.

"This is something I must mention about. Personally, I like working shifts, but many others do not, and the general level of allowance is far too low."

Operators often complain that nobody listens to their point of view. Well, Op Spot is listening and Bernard Allen would like to hear your opinions and ideas on all matters relating to computer operations.

Your letters should be sent to Op Spot, Computer Services, Dorset House, Stamford Road, London SE1 9LU. Telephone calls are equally welcome and Bernard can be contacted directly on 01-281 8035.

At the first of the companies, I had to take a three-hour aptitude test. Subsequently, I was given an interview and asked all sorts of odd questions. I turned down their offer of a job.

The second company was an improvement on the first:

"This time I did, at least, get shown around the computer room and quite liked the look of the site. However, I turned the company down because it would

have meant a lot of travelling and I didn't have a motor at that time."

Third time lucky:

"I went along to the interview and liked it from the very beginning. The operations manager interviewed me and it seemed (and has since been confirmed) that he was genuinely interested in his staff's welfare."

Concerning operations work, he said:

"Contrary to what other members of the computing fraternity seem to think, operations work is interesting and demanding. We operators must think while standing on our feet in order to sort out problems and get the work through."

He mentioned that he enjoys working shifts, although it is working shifts, although it is extremely tiring for the first few months or so. On shift allowance, he said:

"This is something I must mention about. Personally, I like working shifts, but many others do not, and the general level of allowance is far too low."

PEOPLE AND EVENTS

Systems company in Grand Met group

A NEW company was formed within the Grand Metropolitan Group in September. Its name is Grand Metropolitan Systems and it will offer systems consultancy, systems design and computer programming. The services are intended mainly for the other companies in the Group, but the company will also take in business from outside.

The systems company will be based at the Grandmet address in Oxford House, Uxbridge, Middlesex. There will also be a branch at the Brighton address, Wellesley House.

Chairman of the new company is Dilwyn Voyle, who retains his responsibilities as director of information services for the Group, and as chairman of Grandmet Information Processing and Grand Metropolitan Planning.

Voyle's career in DP began with Cilgadr-Pulmotive, where he became head of the systems division. He then became an associate of Biroz, Allen and Hamilton, the management consultancy, and subsequently joined Peterpaster Computer Services where he became chief executive. He has been with Grandmet since March, 1976.

Grand Metropoli Systems' managing director is Nick Timmins, who has been systems director of

Dava Davies Manton Scott

Grandmet Information Processing since February, and played a key role in the formation of the new company. Previously he was systems development manager with Rank Xerox, and before that was a systems manager with IUM.

Dick Manton has become assistant project controller of the branch accounting project in Barclays Bank's management services department. Alex Scott has been promoted to senior analyst/programmer within the department.

Atlantic directors named

AT the Atlantic Group, appointments have been made in the board of directors, and the sales and marketing operation has been reorganized.

Chairman of the Group's board is Vernon Davies, previously a director of Atlantic Computer Leasing. He will have special responsibility for investment and taxation matters.

The job of European sales director goes to Roy Gibson, who is replaced as UK sales director of Atlantic Computer Leasing by Steve Mason. Mason was formerly London and home counties sales manager with

Atlantic Computer Leasing. Tony Rundle, managing director of David Dove, who was previously sales director of Tel UK.

Appointed to the position of operations director for the Atlantic Group's administrative and financial organisation is Ken Jeffs, previously a senior admin manager with the ICL Group. Slang Yin Chang Kai On becomes finance director of Atlantic Computer Leasing and Atlantic Leasing. She was formerly an auditor with Rowland Nevil.

Wang division

THE office systems division of Wang, which markets word processing products, has moved to a new address. The address is: Chichester House, 278 High Holborn, London WC1. Tel: 01-242 8554.

General manager of the division is Ray Redpath. Barry Wiggins, formerly sales manager London, is now national accounts manager, and Vic Kitchener, previously a salesman, has become manager of the London branch. Gill Mitchell, former customer support representative, has become customer support supervisor.

Solving the dilemma of public networks

IN his *Marketview*, Fred Lemond outlined the "Dilemma of public networks" very well (CWI, September 14) but I can't agree with his conclusion.

It may well be, that when all-digital telephone systems are available in 1988 or thereabouts, it will be possible to introduce an integrated voice/data network.

Between now and then, however, we need a public switched data network. It is conceivable that an industrialised nation such as ours should be without such a network and PSS represents the best short-term solution to the problem.

The use of any switched network will involve additional costs, and packet-switching is no exception, but the advantages of a switched system are considerable and the costs will soon be recovered.

To capitalise on switched facilities we need standards and we need experience. These standards can only be generated and the experience acquired in an environment which includes a public network. It is here that EPSS has been so valuable.

The article rightly quoted the high trunk channel utilisation as an advantage of packet switching. This is probably not a very important advantage in the

United Kingdom. Other advantages such as the ability to interwork between devices of different speeds and the ease with which a number of conversations can be multiplexed along a single subscriber link are probably more important.

The outstanding advantage of packet-switching in the next few years, however, is the rapid entry it gives us into the era of public switched data services along with most of the other European countries. This we need — and very quickly.

Major barriers to advances in DP technology

AT the moment when the grossly over-optimistic claims for computer power have fallen to the wager by a chess player that he would not be beaten by a computer in the next 10 years (just completed) it seems opportune for me to say that I am convinced that the arrogant claims of artificial intelligence workers and others have been a major barrier to advances in computer technology.

Another interesting point is that this type of network was proposed by Tymnet for the British Post Office. It was perhaps because Tymnet did not fit in with the X25 protocols favoured by the PO that Tymnet was not among those to put in a tender.

Six years ago in my book *Computer Worship*, I wrote: "... by worshipping the conventional computer, we inhibit development of better machines, which faithful computer worshippers must regard as a threat, as fraudulent super-gods."

I also wrote: "So long as (computer) worshippers thought they had a dangerous wizard in their midst, they would never have a dangerous wizard in their midst."

I am pleading to computer worshippers to put their energies into thinking about and helping to push ahead with improvements in computer architecture.

By this I don't mean cranking up fancy gimmicks in high level software. I mean they must sit down and learn about the hardware, which they have totally ignored, and think about the computing power improvements that we can get from hardware advances.

Start by finding out what a context addressable memory is. Then try to find out what associative processing means. Then in time we will have a machine that plays at reasonable game in chess.

Support for latest Tymnet system

WE have read with great interest Hush Wiener's article on AT&T's planned Advanced Communications Service (CWI, August 17). It calls for some comments.

A large part of the described ideal service is already operating with the Telenet and Tymnet networks which are not even referred to. In fact the description of an ideal network is very similar to the present Tymnet service with its On Tym message switching service. We are sure that in the next few years, well within the timescale for the introduction of AT&T ACS, Telenet will provide an equal service.

Another interesting point is that this type of network was proposed by Tymnet for the British Post Office. It was perhaps because Tymnet did not fit in with the X25 protocols favoured by the PO that Tymnet was not among those to put in a tender.

The general aim of ISDCA is to create national and international networks with multi-protocol capability, using equipment able to offer message switching and data processing facilities.

That is why ISDCA supports the use of the latest Tymnet system and welcomes competition from operations such as Telenet. It also welcomes AT&T's ACS, so well presented in Mr Wiener's article, for it means the entry into the international network field of AT&T with Digital Equipment hardware, a brilliant and powerful combination.

Comment on the various network systems and their development would be welcomed.

COMPUTER WEEKLY EDITOR MALCOLM PELTU TALKS TO EMPLOYMENT MINISTER ALBERT BOOTH ABOUT HOW NEW TECHNOLOGIES WILL AFFECT BRITAIN'S WORKFORCE

DESPITE warnings from many quarters that the "micro revolution" could lead to massive unemployment and industrial disaster in Britain, Employment Minister Albert Booth remains "enormously optimistic" that in the long run the new technology will prove to be of great benefit to the country as a whole.

He is also honest enough, unlike some pundits in this area, to admit that his optimism can be called "an act of faith" rather than being based on a bed-rock of hard factual projections of the total impact of technology in destroying some jobs and creating others.

Booth's optimism is based on his belief that "in this country we have a sense of partnership between organised labour and government which should give us a better opportunity than any other country to work out some of the problems inherent in the introduction of new technologies."

His long-term optimism is tempered by a worry that with the current media stress on the negative employment impact of microelectronics, the new technology is still seen by some in terms that are very different from those in which the Luddites saw new machinery — as a threat to jobs rather than as a means of satisfying social needs and building up employment opportunities.

This view of the labour saving objective of new technology would seem to confirm some of the gloomier predictions about the way that the introduction of information technology could

"lead to vast increases in unemployment.

The introduction of advanced technological processes is unavoidable."

"The realities of world competition mean that we must use labour more efficiently and effectively, boosted wherever necessary by the implementation of automated aids," he said.

"There is no way we can try to employ more people using outdated processes.

And Socialist Booth, just like any capitalist manager, has no doubt about why advanced technological processes are often introduced.

"Obviously the best use of modern technology and the incentive to use it must be that it is worthwhile going in for labour saving."

In order to gain workers' will-

'Urgent need for computer training'

THE Department of Employment has asked the Industrial Training Board to give their best estimates of future skill needs in their areas and to "show convincing proposals as to how far training schemes they will run in the next year will make provision for these future skill requirements" says Albert Booth.

He accepts an urgent need to train people in areas where there

is currently a shortage of skilled manpower, such as in the computing and engineering professions.

But he says, "We can't bypass the traditional training and education system entirely. There is never a right time to change the training process because some skill cannot be taught on a crash six-month course.

"It is important, however, to

take the right decisions now even if it takes four or five years to reap the benefits and that is why we have undertaken this manpower planning exercise with the training boards.

"At the same time, we must make the training system more flexible, enabling people to enter training for new skills not only in their teens but in their 20s, 30s and 40s."

Sperry Univac has finally replaced the sporran.

MICRO NEWS—1

America, seen in the forefront of all technological wizardry, has led the world in the exploitation of semiconductor technology. From the "single chip" transistor, there has developed a plethora of "systems on silicon" that extend now up to the genuine, if somewhat puny, computer on a chip. But in software, and the overall skills of applying this technology,

AS manager of microcomponent design for Motorola Semiconductors at Austin, Texas, Gary Daniels is in one of those rare positions that give a total overview of what is both right and wrong with the global semiconductor scene, and he is not altogether happy with what he sees.

Large sections of the semiconductor industry have changed from the business of producing straightforward components, such as gates and shift registers, so to speak by the barrel-load, to manufacturing what Motorola now refers to as systems on silicon. It is however, looking to produce these systems too by the barrel-load.

With the development of the early microprocessor devices, and the rapid growth in the number of products that have stemmed from that development, the semiconductor industry has started in on a whole new ball-game. "The business," observes Daniels, "failed to realise what it had come up with, and it is only just coming to terms with what it has created."

This background has now created a situation where there are several fundamental problems that need to be solved, and the solution by and large rests in the hands of the

Set on a hill outside the city of Austin, capital of Texas, the Motorola integrated circuit division is now the base of the company's activities in microcomputing and memories.

'The real problem is that most people don't realise that the real problem is software'

not been one of the semiconductor industry's strongest points.

But to make the best of any application, the prime need is for a strong supply of software skills to be available, and here Daniels feels, lies perhaps the most fundamental problem of all. In a convoluted crystallisation of the situation, he says, "The real problem is that most people don't realise that the real problem is software."

There is currently a great shortage of software engineers, which Daniels considers a more appropriate definition of the job function than mere "programmer." This is particularly so in the US, where it appears the

situation is reaching critical proportions.

In the UK, however, we have a definite lead in software. According to Daniels, the UK has a good lead in the development and use of software skills for micro-based systems, which should be exploited. In the US, it seems that concerted exploitation of such skills is some way off, for Daniels puts it, "In the US, many people don't even realise there is a shortage of software people."

To help overcome these problems, one area that is being seriously investigated by Motorola is the scope for firmware modules. While theoretically overcoming the shortage

of software development skills by providing "plug-in" programs, it also has the obvious advantage to a company like Motorola of increasing the opportunities for volume selling of silicon-based products.

"We have to have software modules to make the programming task easier," says Daniels. As an example of this, he points to the number of times software writers "re-invent the wheel" when producing programs, re-writing potential modules time after time. Such modules — from Motorola's point of view — will be natural development, he feels.

Already Motorola, in common

with other semiconductor manufacturers, is working on 144K bit ROMs that mount 8-bit Basic interpreters, and Daniels sees the scope for having structured modules of firmware that work with these interpreters.

This, however, means that the semiconductor business is again creating new frontiers, so it is likely that any developments in this area will be small to begin with. A probable starting point is something like a maths routine in ROM, rather than a complete applications package. The key point here, for the semiconductor companies, will be learning to walk before they can run.

As Daniels puts it, "Software reliability is a real problem, and as a firmware alteration would be difficult and time consuming to make, the software will have to be RIGHT before committing it to silicon."

Of more immediate import to Motorola in making software more accessible for the micro, is the recent announcement that the company's MACS 16-bit device, when it appears early next

From page 18.

CONTINUING to cut prices of hardware for the small computer and hobby markets, Computer Centre of Fleet, Hants has knocked some money off its list prices for both 8K byte static memory boards, and floppy disc

drives.

The 8K boards, previously

priced at £85, have now been

reduced to £79 in kit form, while

the floppy disc drives, which

were sold at £250, are now

available at £195.

It exercises its control

ability by activating one of

the bus management lines, thereby indicating that the bus data lines should be interpreted as command bytes.

Whichever device this is, it

has the additional function of

monitoring the service request

line of the bus, in which mode it

conducts two types of bus poling.

These are the serial poll, in

which the polled devices res-

pond with status bytes, one de-

vice at a time, and the parallel poll,

in which up to eight polled

devices respond in parallel by

sending one status bit each.

A trial interface package for

the IEEE-488 bus will consist of

one 8291 talker-listener, an 8292

controller, five TTL packages,

and five bus transceiver pack-

ages.

The controller itself, the 8292,

Artec word processor imported from US by Data Dynamics

ANOTHER word processor has entered the crowded UK market, this time the Artec Display 2000, which is being imported from the US by Data Dynamics of Heyes, Middlesex. This is a stand-alone printer machine with a single-line display and a separate floppy disc unit.

The printing unit is Dieblo's word processing dot-matrix printer with metal wheels: this provides proportional spacing and right-hand justification as well as a choice of type fonts. The display is Burroughs' gas plasma device, 37 characters wide, mounted on the front of the printer above the keyboard.

Text is stored on either one or two Shugart floppy disc drives in a pedestal that stands beside the typist's desk. Software as well as text is held on disc, so functions can be updated or added to a certain extent without the intervention of an engineer. The processor is the Intel 8080 micro.

The basic Artec 2000 costs £8,950.

Food for thought

TOP men in the energy industry will be giving their views at a series of special lunches in conjunction with The Energy Show at the National Exhibition Centre, Birmingham, from February 18-28, 1979.

The lunches will be at the Metropole Hotel adjacent to the NEC, where equipment designed by more than 150 leading manufacturers in the energy industry will be on display.

Sponsored by the Institute of Fuel, details of The Energy Show may be had from the organisers, Trident International Exhibitions, Abbey Mead House, 23a Plymouth Road, Twickenham, London, Tel: 0822 4871.

The meeting is to take place on Wednesday, October 25, at the London School of Economics starting at 8pm.

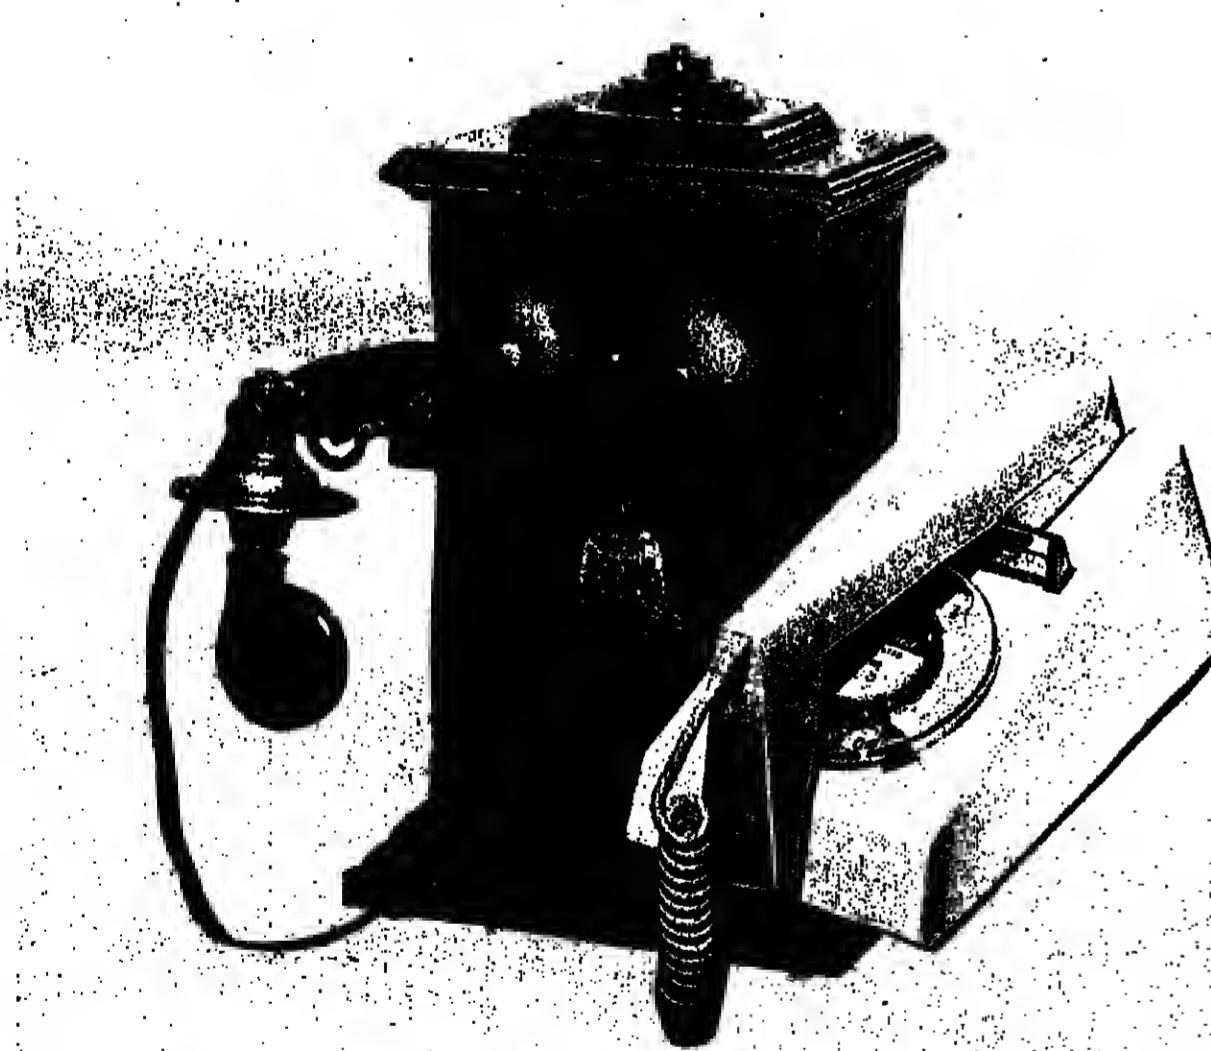

Lobb to head US subsidiary

A NEW subsidiary, to be called Northern Telecom Systems Corp, is being formed in Minneapolis to bring together the Canadian telecommunications company's two recent US acquisitions, Data 100 Corp and Sycor Corp.

John Lobb, former chairman and chief executive of Northern Telecom in Montreal is to be chairman and president of the new subsidiary. He will also continue in the post of chairman of Modcomp. Northern Telecom has no financial interest in Modcomp.

Benjamin to speak on SPIN

THE recent SPIN conference on computing in the Third World is the subject for the next meeting of the BCS Specialist Group for Developing Countries. Speaker will be Alan Benjamin, director general of the Computing Services Association, and the meeting is to take place on Wednesday, October 25, at the London School of Economics starting at 8pm.

TWO TECHNICAL SALES REPRESENTATIVES

Expansion in B.P.C. Business Forms (Coils & Rolls) Ltd. has created openings for Sales Representatives in the Birmingham and Croydon areas. The successful candidates will be required to service existing customers and sell, to new contacts, the Company's high quality Computer Tapes Data Terminal Rolls for non impact printers, Teleprinter and Adding Machine Rolls and ancillary equipment.

Good prospects exist for the sales person, preferably between 23 and 45, who has at least two years' successful experience of selling in the printing, computer peripheral or stationery trades, and who can meet the company's requirements in a demanding but well rewarding occupation.

A good salary plus commission, company car, usual business expenses, contributory pension scheme with free life cover, sickness benefit scheme, four weeks' annual holiday and company product training are amongst the benefits provided.

The Company, a member company with the British Printing Corporation, has its modern manufacturing facilities at Dunstable, supplying both home and export markets with an extensive range of paper products.

Applications, in writing, to:

Mr. R. Graham
Managing Director
B.P.C. Business Forms (Coils & Rolls) Ltd.
George Street
DUNSTABLE
Bedfordshire
LU6 1NW

ANALYST / PROGRAMMER

The Company:
Avdel Ltd—Market leaders in the design and manufacture of advanced engineering systems.

The Configuration:
ICL 2904, EOS 80's and Magnetic Tape Storage
High Speed and Matrix Printers, 7502's and V.T. Communications Equipment.

The Position:
Development and maintenance of a number of diverse projects covering the entire spectrum of the Company's activities—with emphasis on on-line processing.

The Candidates:
Should have a minimum of one year's COBOL programming experience—preferably in a communications environment, although training will be provided to successful applicants.

The Rewards:
• A competitive salary. • Productivity Bonus Scheme. • Opportunities for career advancement. • Excellent conditions of employment.

Contact:
The Recruitment Officer.

Mundell, Welwyn Garden City,
Welwyn Garden 20161; ext 339

ROYAL MILITARY COLLEGE OF
SCIENCE, SHREWSBURY

PROGRAMMER

A programmer is required at this College to work on a contract in the use of computers in army training.

Qualifications and Experience

Candidates should normally have an HNC in a scientific, engineering or mathematical subject, or equivalent professional qualification, and must have a minimum of four years' experience in programming and software design on mini computers. Working knowledge of BASIC programming in scientific applications is essential, and a knowledge of FORTRAN and COBOL is desirable. Preference will be given to candidates familiar with techniques for assessing the outcome of an engagement in a war gaming situation. Experience in the design of interactive systems and a special interest in user interfaces in these systems is highly desirable.

Appointment

The appointment will be for two years in the grade of Higher Research Scientist/Research Scientist (salary scale Higher E2638-E4448 p.a.) — Research Scientist.

The successful candidate will be based at Royal Military College of Science, but will also be required to work at other Army Establishments. Single officer accommodation may be available at all these establishments.

Application forms from Civilian Admin. Office, Royal Military College of Science, Shrewsbury, Shropshire, SY1 1JA. Telephone 0793 782561, Ext 421, quoting HQ/120/1/80.

Closing date 3rd November, 1978.

COBOL Programmer

OVERSEAS ASSIGNMENT

The Kuwait Institute for Scientific Research, a rapidly expanding institute for applied science and technology, is seeking a Cobol Programmer interested in taking up a challenging career.

As Cobol Programmer, you will be responsible for the design and implementation of an on-line Management Information System (MIS). Candidates should have a B.S. or M.S. and a minimum of 3 years' experience in Cobol programming and data base design.

CONTRACT PERIOD: 2 years.

Kuwait Institute offers attractive salaries commensurate with qualifications and experience, liberal fringe and medical benefits including round trip air tickets.

Please airmail complete resume by November 6, 1978 to: Mr. Habib Al-Saftai, Personnel Controller, Kuwait Institute for Scientific Research, P.O. Box 24883, Safat, Kuwait, State of Kuwait.

Eurologic

Consultancy

RPG 11 and/or BASIC

Programmers and Senior Programmers

LONDON and the MIDLANDS

To £7500 plus COMPANY CAR

Interviewing in London, Coventry, and Manchester

EUROLOGIC is growing. As a leading specialised small system software house, our reputation continues to bring in more orders for the development of wide ranging systems on small machines. We are now looking for the right people to help us on these new projects. If your background includes at least 2 years in commercial systems using RPG 11 or BASIC then we have something to interest you.

We need people in London and the Midlands. If you have at least 2 years' RPG 11 PROGRAMMING on any machine, System 3, 370, ICL, etc., or have had extensive COBOL and are interested in learning RPG 11 then we would like to talk to you. In addition we need senior RPG 11 and BASIC people and are happy to pay up to £7500 for them. If you currently live outside these areas but are interested in relocating then we will help pay removal expenses. You will need other qualifications besides actual DP experience. You should be mobile, a car owner/driver. You should be able to communicate your ideas both to us and our customers. Above all, you should enjoy the consultancy environment where you will face a continual variety of work and will often be acting on your own.

In return we can offer many benefits that you won't, perhaps, find where you are now. Benefits such as the opportunity to gain experience on different machines. We cover System/3 up to 15D, System/32 and /34 as well as 5110 and other MINIS and MICROS. Other benefits include cars, after one year, paid overtime, 4 weeks' holiday and a non-contributory sickness and accident scheme, and, very important, a sociable working atmosphere in a young and enthusiastic company.

So, all together, we think we have a lot to offer, and if you feel your skills deserve a better reward, call us now on 01-549 8933 and ask for Richard Barker or drop me a line to the address below. If you prefer please call me at home, evenings and weekends on 01-977 7554.

We shall be at the POST HOUSE HOTEL near COVENTRY on the 17th and 18th of OCTOBER so call RICHARD BAKER there, tel. ALLESLEY (020334) 2151 and arrange to drop in for a drink, or ring him at the Kingston number before the 16th. Later on in the week we shall be at the PICCADILLY HOTEL, MANCHESTER so call Richard in Kingston or Coventry to arrange a meeting there.

Computer Operators and Trainee Computer Operators

The Central Electricity Generating Board have a number of vacancies for Computer Operators and Trainee Computer Operators at its Head-quarters Computing Centre located at 65 Park Street, London SE1 9QY.

The computing configuration consists of:

- 1 - IBM System 370 Model 168K operating under MVT/ASP
- 1 - IBM System 370 Model 168/133 operating under MVS/SES
- 1 - IBM System 3032 will shortly be installed.

Both Model 168's have access to magnetic disc and tape sub-systems and other peripheral devices. The installation also supports a large data transmission network of remote processors and terminals. The central computers are operational seven days a week and are manned by 5 shifts of operating staff.

Applicants for the post of Computer Operator must be over 18 years of age and should possess GCE 'O' levels or equivalent qualifications, together with at least one year's operating experience preferably in a large computer installation. Consideration will also be given to those without experience for appointment as a Trainee Computer Operator. The salaries for these positions will be dependent upon experience and will be within one of the following ranges:

COMPUTER OPERATOR £3076-£4097 per annum inclusive

TRAINEE COMPUTER OPERATOR £2197-£3398 per annum inclusive

Applications stating full relevant details and present salary to the Group Personnel Officer, C.E.G.B., Sudbury House, 15 Newgate Street, London EC1A 7AU, by 19 October 1978. Quote Ref. ES/320.

CENTRAL ELECTRICITY GENERATING BOARD

Salary up to £4K inc. shift allowances. Applications are invited for the position of Computer Operator in our Crawley computer installation. The position is an important one on a two shift system using an ICL 18021 80K machine operating under George II.

The installation is changing rapidly, and will soon be installing a 'wavelet' audio response system which will eventually be used by all 260 dealers in the Toyota network.

We would require an applicant with experience in this field for which a salary of £4K will be paid. However, the company will consider an enthusiastic trainee whose salary will depend upon past business experience, educational qualifications and age.

Applications should be addressed to:

Maurey Cross Toyota (GB) Ltd,
320 Purley Way, Croydon CR8 4HE
or telephone 01-681 1921.

1st Class Computing Opportunities

FOR HOLDERS OF G.C.E. QUALIFICATIONS, GRADUATES & EXPERIENCED PROGRAMMERS

The Computing Services Division of the British Railways Board deals with a very wide spectrum of computing applications, ranging from batch financial application to one of the largest on-line systems in the U.K. Opportunities will be given in the following areas:

Mini-computer applications

Conversion from ICL 1900 to ICL

2900 machines

Computer graphics

National financial applications

This work is technically challenging and will provide a sound basis for a career in Data Processing.

A short formal training programme will be given followed by practical training. Selected candidates will be assigned to BR Computing Centres in Crewe, Nottingham or Reading.

Applicants will hold a Degree (or equivalent) qualification or a minimum of two good GCE 'A' levels plus a good GCE 'O' level in English for the junior appointments together with two years' programming experience for the more senior positions. Salaries will range from £2453 to £3633 for the junior posts and from £4218 to £5184 for the senior posts.

Request for application form should be sent to

Don't let your programming experience gather dust

Your programming
experience
did not just happen like a bolt
from the blue. You have had to
work at it... so why use you
letting it go to waste, when you could be
getting more credit for your talents
with IAL?

At our offices in West London near
Heathrow Airport, we have been working on
communications systems for some thirty years.

Currently, we are engaged in a variety of on-line
projects based on single and multiple Data General
Nova/Eclipsa systems, such as computer-aided
despatch systems both for this country and
overseas. For you, this will not only bring the
opportunity to be part of an exciting line of
development, but could also mean some
overseas travel. All this, plus a salary of up to
£6000 and an understanding that programmers
with the right ability have every opportunity
to progress to more senior positions.

If you have experience with Fortran and multi-
programming or multi-tasking on mini-computer systems,
come and discuss your ambitions with us. By the way,
in addition to a comprehensive benefits package, we can
also provide generous assistance with relocation
expenses.

Please telephone or write for details quoting ref. 498A

PROJECT LEADER CITY

£9,500

Unique opportunity exists within multi-national telecommunications conglomerate for project leader. A challenging position with responsibility for large team developing major message switch system. Duties will therefore include co-ordination of the team's design of a state-of-the-art system, including in-house design, development, testing, and implementation. The project will be based in the city. Salary on the scale £9,500-£11,000.

Further particulars may be obtained from reference L88/1A from the Recruitment Officer, Plessey Telecommunications Research Ltd, Taplow, Taplow Court, Taplow, Maidenhead, Berks, RG10 8AA.

A new team of documentation engineers is to be set up to work closely with the development engineer. The work will allow close involvement with the project and provide considerable scope for increased experience. As well as writing descriptive text and documentation, this appointment will assist in the operation of a documentation control system.

Applicants ideally should have at least 2 years experience of technical writing in either the electronics or computing fields.

The working environment at Taplow is very pleasant; the site occupying land on the banks of the river Thames only 35 minutes from central London. Salaries pro-
-pension, etc. are competitive. There is an attractive benefits package including generous relocation expenses where appropriate.

For further information and application form, call Sally Griggs on Maidenhead (0628) 23351, or write to her at:

Plessey Telecommunications Research Limited

Accord Computer Efficiency

Amsterdam based Business Consultant

£15,000-£25,000

Accord's business is providing a comprehensive personnel consultancy for clients in Western Europe. This includes:

- 1 Contract personnel for short/long term assignments
- 2 Specialist recruitment assignments tailor-made for individual clients
- 3 Advertising and P.R.
- 4 Marketing and sales facilities

We now wish to recruit a progressive and successful individual who must have a proven record of significant achievement in at least two of the above areas within the D.P. industry. Our growth to date has resulted in a profitable and highly respected organisation with a secure and established client base.

We intend to include one or two additional consultants who, by their own contribution and involvement in our expansion plans, will benefit not only financially, but by being a vital part of a positive and enthusiastic success story.

A substantial basic salary of about £10-£12,000 will be negotiated and a commission scheme designed to more than double this income will be discussed.

Our base is in the financial centre of Amsterdam where cost of living is about 40 per cent higher than London, compensated by substantial tax concessions.

Telephone Bill Seymour at your first opportunity for further details and a totally confidential discussion.

Holland Mini Computer Software

£16,000+benefits

The consensus of opinion in the computer industry is that Mini and micro-computer systems, during the foreseeable future, will be more widely used and universally accepted in all areas of Computer Technology. Europe's leading software design and implementation organisation, which has an outstanding reputation in the technical, telecommunication and scientific systems fields wish to recruit a significant number of Programmer/Analysts, Consultants and Senior Consultants experienced in the following

- Real-Time Systems
- On-line Systems
- Message/Packet Switching
- Network Design

Conditions of employment and career development opportunities are excellent. Relocation costs will be met by our client. Interviews will be arranged in London during the end of October and beginning of November. Telephone Bill Seymour on 01-580 3754 for further details in total confidence.

SYSTEMS DEVELOPMENT MANAGER MIDDLESEX

C. £8500 + CAR

Our client, based in Middlesex, is part of a large international engineering and contracting group. A growing area of the group's business is the management of the design and construction of all types of large projects including offshore oil production facilities in the North Sea. These large and complex projects are creating an increasing demand for computer based control and information systems.

The Company is upgrading its existing mainframe computer to an IBM 370/1416 before the end of the year with RJE and VDU based access at a number of locations.

The successful applicant will have full project control responsibility including the investigation of user needs and requirements, developing, proposing and agreeing DP solutions and implementing these systems utilising the existing and planned hardware facilities.

All systems and business analysts will report to the development manager who must be capable of technical leadership and man management.

Applicants should preferably be aged between 35 to 45 with a proven record of achievement in the computer systems development field and will have been directly involved in the management of at least one major computer project.

THE OPEN UNIVERSITY
STUDENT COMPUTING SERVICE

SHIFT SUPERVISOR

Applications are invited for the post of Shift Supervisor at the University's computer centre in both Milton Keynes and North West London.

The Student Computing Service offers a nationwide training service on DEC 20 and Hewlett Packard 2000 systems based in North West London Milton Keynes and Newcastle upon Tyne.

The Shift Supervisor will be responsible to the Assistant Area Computing Services Manager for the efficient operation of the computer systems during the shift and will be expected to maintain a high standard of advisory support to students and other users. The successful candidate is likely to have previous supervisory experience in computer centres offering a similar service.

Salary will be within the range £3,004-£4,164 plus an additional of the University Superannuation Scheme. Extra shift working will be required for which an allowance of £145.74 will be paid. A London allowance will be paid for the North West London post. The University offers a holiday allowance of 30 days, plus an annual plus one week University closure periods at Christmas and Easter.

Applications forms and further particulars are available by postal request please from The Recruitment Office (JD3653) 1, The Open University, P.O. Box 75, Walton Hall, Milton Keynes, MK7 6AL or telephone Milton Keynes 83404, there is a 24 hour answering service on 63686.

Closing date for application: 27th October 1978

EQUIPMENT PLANNING ENGINEER

(c) £7300+

Harrogate

Applications are invited for a senior position in the Computer Branch based in the Board's Regional Headquarters, Beckwith Knowle, Harrogate. The Computer Branch is responsible for computer development and production on an ICL 1945 computer, and bears functional responsibility for Regional work on the IBM 370/168 installation in London and the development utilising computers elsewhere in the Region.

The Shift Supervisor will be responsible to the Assistant Area Computing Services Manager for the efficient operation of the computer systems during the shift and will be expected to maintain a high standard of advisory support to students and other users. The successful candidate is likely to have previous supervisory experience in computer centres offering a similar service.

Salary will be within the following range: £7,261 p.a. to £8,805 p.a. with possible progression to £9,322 p.a. subject to review. Point of entry will be dependent upon age and qualifications.

Applications to be on standard forms obtainable by telephoning the Recruitment Section (Harrogate 704635) and should be returned to:

The Regional Personnel Manager, Central Electricity Generating Board, North Eastern Region, Beckwith Knowle, Olivry Road, Harrogate HG3 1PS.

In answer to the question 'Tuesday 24 October, 1978', the date quoted above is correct.

Central Electricity Generating Board - North Eastern Region

ASSISTANT COMPUTER MANAGER (Ref. M102)

Salary up to £6342
inclusive of supplement

The Borough of Milton Keynes which is located in north Buckinghamshire is one of the fastest growing local authorities in England and contains within its boundaries the new city of Milton Keynes.

The Council have an IBM System 3 (Model 12) 64K Computer and the successful applicant will be required to design new systems, to develop existing ones and to supervise their programming.

The post offers the opportunity for an experienced Systems Analyst to gain valuable and varied experience in all aspects of computer operation. Experience of RPG II Programming would be an advantage.

(tel. Milton Keynes (0908) 71171 ext. 401)

JBA CAD/CAM Consultant

c. £14,000 package

Holland

This senior position will suit a specialist in computer aided design/management wishing to apply his or her experience and knowledge in a consultancy role. The particular skills required are in the areas of interactive graphics applications, numerical control system design, part production systems and design analysis. Dealing with potential customers and assisting the sales and support teams will be the essential part of the job, as well as advising the programming and design teams.

The successful candidate will have a proven track record in CAD/CAM type development and sales, be a highly personable and presentable individual with a willingness to travel and deal with people at all levels. European language ability an obvious bonus.

Attractive senior staff position offering tremendous scope for creativity, job satisfaction and career development.

Project Manager and Sales Engineer

c. £8,000

London

A well established organisation who specialise in computer-based industrial systems has immediate vacancies for both a Sales Engineer and a Senior Project Manager.

Applicants for the sales position must be able to demonstrate a sound background in industrial/process control systems together with an ability to negotiate and close sales in a competitive market.

Since the management vacancy is to control a number of projects, each with its own project leader, candidates should have several years experience in project management and have the maturity and diplomacy to liaise with clients.

Both positions offer excellent salaries which are negotiable but unlikely to be less than £8,000. Large company benefits.

Contact: Jim Baker

Systems Auditor

c. £7,000

London

One of the leading software houses wishes to appoint a Systems Auditor to undertake the checking and quality assurance of all projects currently being developed by the company.

Applicants should have at least five years experience as a programmer and analyst and fully appreciate the need for project control, standards and technical (as well as time/money) audits in a D.P. development team. This is a London based position but some travel will be essential to visit out of town assignments.

Salary is negotiable according to experience.

Systems Manager

£6,800-£7,000

Somerset

This highly successful electrical component manufacturer has retained JBA to help recruit a Systems Manager to run their relatively new PDP11/34 installation in Somerset. It is a small and very professionally set up site, running various commercial on-line systems under RS15/32, using BASIC as the programming language.

Ideal candidates will have a good commercial systems background, allied to relevant DEC experience, and be the type who enjoy taking on a great deal of responsibility - involvement with all aspects of the D.P. department's work will be inevitable in such a small intimate environment.

Apart from the quality of life naturally associated with living in the West Country, the position offers a reasonable salary plus D.P.A. and a generous holiday entitlement.

Relocation expenses will be available where necessary.

Project Manager

up to £8,000

London

We have been retained by a large manufacturing organisation to recruit a Project Manager to take responsibility for the development of sales accounting systems.

The successful candidate will lead a team consisting of highly motivated professionals. A proven record in project management is essential. Knowledge of IBM, PDP11 or on-line systems would be an advantage. Specific experience of commercial applications is desirable.

This is an opportunity to progress in a well established but dynamic group.

Benefits include O.U.H. and interest free staff loans.
